Composite Structures **26** (1993) 211

CONTENTS OF VOLUME 26

Numbers 1 & 2

About the modelling of laminated composites 1
S. F. M. ABD-EL-NABY, L. HOLLAWAY & M. GUNN (UK)

Effective thermoelastic properties of unidirectional fiber-reinforced composites and their sensitivity coefficients 7
A. K. NOOR & R. S. SHAH (USA)

Improved correlation of predicted and experimental initial buckling stresses of composite stiffened panels 25
T. ISHIKAWA, M. MATSUSHIMA & Y. HAYASHI (Japan)

Closed-form solution for the free-edge effect in cross-ply laminates 39
W. BECKER (Germany)

Filament wound torispheres under external pressure 47
J. BŁACHUT (UK)

Finite element study for natural frequencies of cross-ply laminated cylindrical shells . . 55
Y. NARITA, Y. OHTA & M. SAITO (Japan)

Thermal stresses in thick laminated composite shells 63
F. G. YUAN (USA)

On the contact of a spherical indenter and a thin composite laminate 77
A. P. CHRISTOFOROU (Kuwait)

Effect of fiber architecture on manufacturability and crush performance of a stiffened plate type RTM structure 83
V. M. KARBHARI (USA) & S. G. SLOTTE (Finland)

A simple method to estimate the buckling stress of stiffened sandwich panels . . . 95
M. HEDER (Sweden)

Numbers 3 & 4

An application of the single specimen technique to a double cantilever beam specimen to determine G_{Ic} from a single test record 109
K. Y. RHEE (USA)

An automated technique for manufacturing thermoplastic stringers in continuous length 115
Sp. PANTELAKIS, E. BAXEVANI (Greece) & U. SPELZ (Germany)

An improved zig-zag model for the bending of laminated composite shells 123
P. B. XAVIER, K. H. LEE & C. H. CHEW (Singapore)

Prediction of thermal expansion coefficients of plain weave fabric composites . . . 139
N. K. NAIK & V. K. GANESH (India)

The residual thermal stresses due to cool-down of post cure for the symmetric cross-ply TCM composite material 155
R.-S. CHEN, C.-Y. TU & G.-S. CHEN (Taiwan)

Boundary beam characteristics orthonormal polynomials in energy approach for vibration of symmetric laminates — I: Classical boundary conditions 167
K. C. HUNG, K. M. LIEW, M. K. LIM & S. L. LEONG (Singapore)

Boundary beam characteristics orthonormal polynomials in energy approach for vibration of symmetric laminates — II: Elastically restrained boundaries 185
K. C. HUNG, M. K. LIM. & K. M. LIEW (Singapore)
